Specifications

Constructed of high-grade abrasion and chemical resistant solid-cast material with three standard cups or multiple disc configuration. Capable of negotiating tight-radius bends as well as varying internal diameters of nominal pipe. Designed to allow the pressure of the line to seat the outer sealing surface of the cup or disc against the internal pipe surface to ensure positive seal.

Applications

Used for product removal, batching, hydrostatic testing, and paraffin, debris or other buildup removal. Lighter in weight than steel pigs allows for longer and more efficient runs.

Options

Cup or cup-and-disc configuration; conical cup design; varying durometers (hardness); transmitter or pinger cavity; magnets; customized dimensions for special pigging applications.
